

CEGEDIM LOGICIELS MEDICAUX'S ONCOBAZE V.8 FOR THE ONCOLOGY OF TOMORROW

CLM WILL DEMONSTRATE ITS SOFTWARE AT THE RENCONTRES DE LA CANCÉROLOGIE FRANÇAISE (RCFr) CONFERENCE OF FRENCH ONCOLOGISTS ON DECEMBER 15 AND 16, 2009, AT THE CITÉ INTERNATIONALE UNIVERSITAIRE DE PARIS, 17 BOULEVARD JOURDAN, PARIS 75014 - STAND A6

Paris, November 18 2009 – Cegedim Logiciels Médicaux (CLM), software publisher and service provider to the medical profession, is proud to offer oncology departments the latest version of its Oncobaze software for ensuring chemotherapy treatment security and traceability. The new v.8 version of Oncobaze, equipped with a wealth of functions, will be demonstrated at CLM's stand (A6) during the Rencontres de la cancérologie française (RCFr) conference of French oncologists, to be held December 15 and 16, 2009, at the Cité Internationale Universitaire de Paris.

Oncobaze is already used by close to 60 hospital units, including 26 clinics of the Générale de Santé group that have oncology departments. These units now have the option of upgrading to version 8 of the software.

Oncobaze v.8 is adapted to the latest developments

- The new version is able to **manage remaining medication**, allowing an establishment's pharmacy to control product validity, storage conditions and costs. Open flasks can now be quantified in the software.
- It is also adapted to the latest regulatory developments, **taking into account the Contrat de Bon Usage (Good Practice Contract)** as required by the Regional Health Agencies.

"Version 8 still offers the flexibility, efficiency and adaptability that have made Oncobaze's reputation over the past 10 years. Oncology is a key field for CLM. Our dedicated Oncobaze unit employs a staff of around 12, and we surround ourselves with the expertise of oncologists so we can constantly improve the way we meet the demands of the market," says Thierry Cazettes, Large Accounts Director in charge of Oncobaze.

Oncobaze's functionalities benefit every member of the oncology department. They put the prescriber – the oncologist – at the center of the care process by providing assistance with TNM cancer classification determination and with treatment protocol selection by using a decision tree. For the pharmacist, Oncobaze is a control and validation tool, including instant graphic visualization of changes in dosage, and makes it easier to take into account cumulative doses of cytotoxic drugs. It lets preparation staff easily print production sheets, manage reminders, and automatically calculate

the number of bag needed for the treatment. Lastly, for the nurse, the software supplies a list of precautions and makes it easy to print administration sheets.

The advantages of Oncobaze:

- Takes into account criteria in the good practice contract: prescription, validation, traceability, patient planning, security
- Adapts to a constantly changing regulatory environment
- Can take an existing system into account in transitioning to Oncobaze
- Open technical architecture: Mac® OS or Windows®
- Decision-making assistance that puts the oncologist at the center of the care process

The *Rencontres de la cancérologie française* meeting of French oncologists, to be held for the second consecutive year, is known as “the place to meet the oncology of tomorrow”. For more information, please visit www.rcfr.eu.

About Cegedim Logiciels Médicaux (CLM):

CLM is a subsidiary of France's Cegedim Group, a leader in medical IT, and offers a broad range of software called **LC 2009** and services for healthcare professionals.

This range of software ensures that physicians' IT equipment complies with the latest technical and regulatory requirements while allowing them to choose the solution best suited to their specialties and type of practice (private practices, clinics, healthcare centers and networks). Structured, communicative, interoperable, and scalable, the Cegedim line of software (Crossway, MédiClick! Studio, Doc'ware, Cardiolite, Eglantine, Megabaze, Oncobaze, Medigest) is designed with information sharing and the DMP (French Personal Medical File) in mind.
